wireSENSOR

Customer-specific modifications for your series application

If the standard models do not meet certain specific requirements, draw-wire sensors from the standard range can be adapted accordingly by Micro-Epsilon. Cost-effective implementation can already be achieved with medium-sized quantities (depending on the type and number of changes).

Wire attachment
- Wire clip
- Eyelet
- Thread
- Wire extension

Measuring wire
- Plastics
- Stainless steel (coated/uncoated)
- Different diameters
- Thicker wire for improved snap
  protection

Connection/Output signal
- Different cable lengths
- Different plug variants
- Redundant sensor element
- Adaption of supply voltage
- Inverted signal
- Redundant signal outputs
- Alignment cable/connector outlet

Sensor mounting
- Mounting bracket
- Mounting plate
- Magnetic holder

Wire guide
- Wire wiper
- Different designs of integrated deflection pulleys
- Wire outlet socket from ceramics for increased diagonal pull up to 15°

Housing and environment
- Wire outlet right (standard) / left
- Protection class up to IP69K
- Drainage holes
- Stainless steel spring
- Housing material
- Wire acceleration
- Snap protection

**Installation instructions:**

Wire attachment: during installation, do not allow at any time the measuring wire to freely return.

Angle of wire outlet: Make sure during installation that the wire outlet is straight (tolerance of ±3°). Exceeding this tolerance leads to increased wear of the wire material and on the wire outlet.

Wire outlet 0° (±3° tolerance)

Connections

SET	**Zero setting input** For setting a zero point at any point. The zeroing process is triggered by a High pulse and must take place after the rotating direction selection (DIR). Pulse duration > 100 ms. For maximum interference immunity, connect to 0 V after zeroing.
DIR	**Counting direction input** When not connected, this input is on High. DIR High means increasing output data with a clockwise rotating shaft when looking at the flange. DIR Low means increasing values with a counterclockwise rotating shaft when looking at the flange. For maximum interference immunity, connect to +Vs or 0 V depending on the direction of rotation.

PROFIBUS

Profibus DP features	
Bus protocol	Profibus-DPV0
Device profile	Device class 1 and 2
Cyclical data exchange	Communication in accordance with DPV0
Input data	Position value Additional configurable speed signal
Output data	Preset value
Preset value	This parameter can be used to set the rotary encoder to a desired position value that corresponds to a defined axis position of the system. The storage is non-volatile.
Rotary direction	This parameter can be used to parameterize the direction of rotation in which the position value should rise or fall.
Scaling	Parameterization of the steps per rotation and the total resolution.
Gear factor	Adjustable via counter / denominator
Diagnosis	Position and parameter errors Monitoring multi-turn scanning Readable hour meter
